## 2020

---

**KOMODO®**

## **The Glove Company has a powerful mission.**

To provide protection, safety, utility and comfort to people who work with their hands in potentially damaging and dangerous working environments.

The Glove Company has a vision that drives the business.

To build an innovative growing and successful business through the development of unique purpose-built gloves that meet the specific industry needs of people who work with their hands.

To be recognised as the leading industry innovator who develops and manufactures the best "fit for purpose" range of gloves in the market.

## Chemical Resistance

'Request Product Chemical Resistance Guide'

The information "i" shown in this pictogram indicates that the gloves resistance to chemicals will be shown on a separate reference sheet.

'Low Resistance' 'Waterproof'

For gloves that cannot resist some chemicals for more than the required 30 minutes.

EN 374-2 MicroOrganisms

The 'Micro-organism' pictogram is to show when the glove conforms to at least a performance of less than 60 minutes (level 2) for the Penetration test.

EN 374-3 Chemicals (fig 1)

EN374-3

ABCDE  
GHIJKL

LETTER	CHEMICAL
A	Methanol
B	Acetone
C	Acetonitrile
D	Dichloromethane
E	Carbon Disulfide
F	Toluene
G	Diethylamine
H	Tetrahydrofurane
I	Ethyl Acetate
J	n-Heptane
K	Sodium Hydroxide 40%
L	Sulphuric Acid 96%

## Tested EN Chemicals

There are more than 15,000 chemicals commonly used commercially and industrially worldwide, this is why EN 374 approved and tested chemicals are so important. These 12 chemicals are carefully tested and selected to give the best overview of a glove's chemical performance.

A glove **must not** have a **permeation breakthrough** when immersed for a **minimum of 30 minutes** in one of the 12 chemicals (shown to the left) to be awarded the adjacent letter.

## Heat Resistance

For level 3 of conductive heat the glove's inside material must manage 350°C heat for 15 seconds before the material exceeds 35°C from ambient temperature of 25°C.

EN 407

X 3 X

After Burn Time

Contact Heat

Convective Heat

## Food Safety

**What is HACCP?** A developed system designed to identify and minimise points of failure. HACCP is also used as an international food safety certification for a variety of successful products. If a product shows the HACCP logo it is of the best food safety standards.

## Mechanical Risks

EN388

eg. 4 1 2 1

### Abrasion

This 1-4 digit represents how many cycles of a coarse surface the glove can handle until failure.

### Cut

Grade 3 gloves are commonly used for handling rough edges up to 5kg.  
Grade 5 gloves are commonly used for broken glass or knives.

### Tear

The higher this 1-4 digit the more torque (Nm) a glove can take in a tearing motion.

### Puncture

1 = 20Nm until break  
2 = 60Nm until break  
3 = 100Nm until break  
4 = 150Nm until break

Test	Performance Level				
	1	2	3	4	5
Abrasion Resistance Cycles	100	500	2000	8000	-
Blade Cut Resistance	1.2	2.5	5	10	20
Tear Resistance (newtons)	10	25	50	75	-
Puncture Resistance (newtons)	20	60	100	150	-

## The Importance of Independent Testing

**Testing: Is crucial in the safety industry.**

Always ensure that the gloves you decide on are independently third-party tested and certified.

Unless the results have come from an independent third party accredited test facility, then you are just taking someone's word for it.

It is also advised that the facility is based in a country where standard enforcement is strong.

The Glove Company gloves have been independently third-party tested in Australia under AS/NZS 213.3:2005 / EN388 in conjunction with Vic Labs who have in turn been independently tested and accredited that their test results are of the highest standard.

VIC LAB

# TGC® NITRILE GLOVES BLACK

## The Glove that changed an industry!

The first ultra-tough, black disposable glove in Australia and NZ.

Our unique formulation set the standard in Nitrile glove performance and is still the strongest, toughest and most chemically resistant glove material on the market.

TGC® Black Nitrile Disposable Gloves are enhanced with the latest low sweat technology.

TGC® Black Nitrile Disposable Gloves are the only black disposable glove certified for NATO and NSN codification for use by the defence force and aviation industry.

# TGC® NITRILE GLOVES ORANGE HI-VIS

## Light the Way!

Australia and New Zealand's first Hi-Vis Orange Disposable Glove with all the ground-breaking performance of the original TGC® Black Nitrile Glove, including Low Sweat Technology.

The only Hi-Vis disposable approved for use by the Defence Forces and aviation industry.

The number one preferred glove for aviation maintenance across Australia and NZ.

TGC® Orange Nitrile Disposable Gloves feature a high-impact orange visual contrast surface, making it easy to detect hazardous contaminants and prevent cross contamination.

# CHLORONITE<sup>®</sup>

## CHEMICAL GLOVES<sup>®</sup>

### Lightweight advanced co-polymer technology

Chloronite<sup>®</sup> is the new lightweight chemical glove that is exceeding industry standards. Our Chloronite<sup>®</sup> chemical resistant gloves have been awarded a rare 11 letter rating under the EN 374, AS/ NZS 2161.10.1 2005 standard. Unheard of!

Say goodbye to big chunky chemical gloves, now you can use an agile lightweight glove with high levels of dexterity for a vast range of hazardous chemicals.

This is the result of exhaustive research and development by The Glove Company<sup>®</sup> which has produced a world leading solution for chemical protection in hand safety.
