# Learn About.. Our Brands

Our namesake brand. The Original. The Best. The World's Toughest. The glove that started it all.

---

TGC®'s little brother. Industrial Trade Quality. Cost-effective.

---

Lightweight. Comfortable. Ultra cost-effective black nitrile.

---

Innovative. Quality. General-Purpose. Blue Nitrile.

---

Finest quality medical range of Nitrile Gloves.

---

Tough. Reliable. Quality. Material handling hand protection.

---

Sweat Reducing. Comfort. Hygienic. Potentially Dermatitis Reducing.

---

Incredibly Strong. Xtra Grip surface designed for dealing with oil and grease.

---

Ecofriendly. Biodegradable in landfill.

---

Strong and thick. Extreme Grip. Extended 270mm Long Cuff.

---

Fully-Lined for Ultra Comfort. Mega Grip. Extended 300mm Long Cuff.

---

## Learn About.. Glove Standards

### Chemical Resistance

#### Request Product Chemical Resistance Guide

The information 'i' shown in this pictogram indicates that the gloves resistance to chemicals will be shown on a separate reference sheet.

#### Low Resistance Waterproof

For gloves that cannot resist some chemicals for more than the required 30 minutes.

#### EN 374-2 MicroOrganisms

The 'Micro-organism' pictogram is to show when the glove conforms to at least a performance of less than 60 minutes (level 2) for the Penetration test.

### Tested EN Chemicals

There are more than 15,000 chemicals commonly used commercially and industrially worldwide, this is why EN 374 approved and tested chemicals are so important. These 12 chemicals are carefully tested and selected to give the best overview of a glove's chemical performance.

A glove must not have a permeation breakthrough when immersed for a minimum of 30 minutes in one of the 12 chemicals (*Fig 1*) to be awarded the adjacent letter.

#### Chemicals

<b>A</b> Methanol	<b>G</b> Diethylamine
<b>B</b> Acetone	<b>H</b> Tetrahydrofurane
<b>C</b> Acetonitrile	<b>I</b> Ethyl Acetate
<b>D</b> Dichloromethane	<b>J</b> n-Heptane
<b>E</b> Carbon Disulfide	<b>K</b> Sodium Hydroxide 40%
<b>F</b> Toluene	<b>L</b> Sulphuric Acid 96%

(Fig 1)

## Heat Resistance

For level 3 of conductive heat the gloves inside material must manage 350°C heat for 15 seconds before the material exceeds 35°C from ambient temperature of 25°C.

## Food Safety

### What is HACCP?

A developed system designed to identify and minimise points of failure. HACCP is also used as an international food safety certification for a variety of successful products. If a product shows the HACCP logo it is of the best food safety standards.

## The Importance of Independent Testing

### Testing: Is crucial in the safety industry

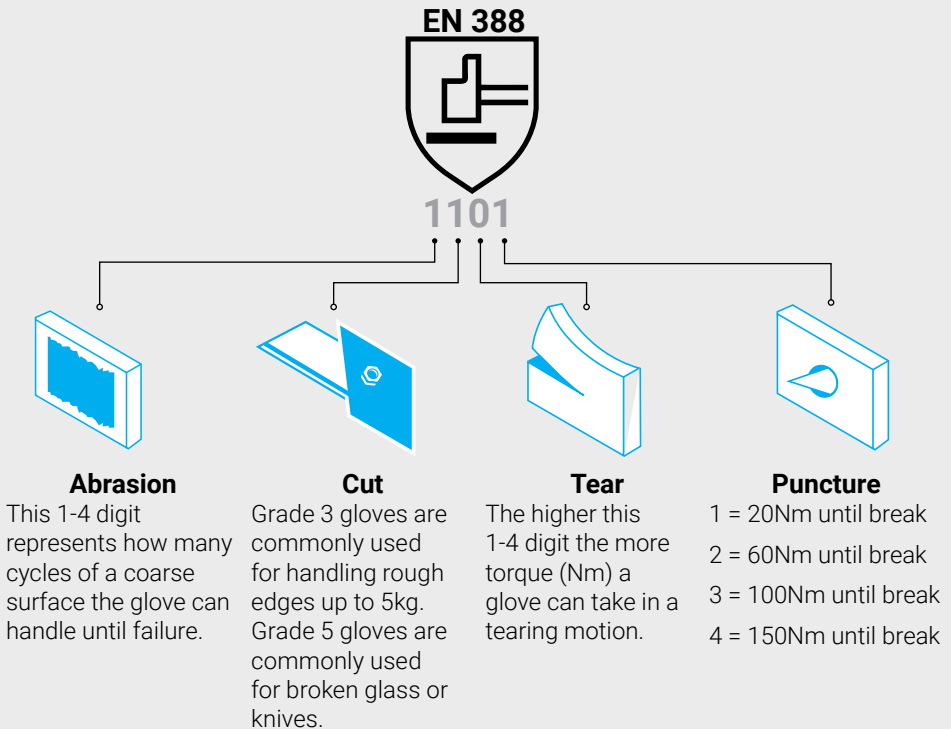

Always ensure that the gloves you decide on are independently third-party tested and certified.

Unless the results have come from an independent thirty party accredited test facility, then you are just taking someone's word for it.

It is also advised that the facility is based in a country where standard enforcement is strong.

The Glove Company gloves have been independently third-party **tested in Australia** under AS/NZS 21.3:2005 / EN388 in conjunction with Vic Labs who have in turn been independently tested and accredited that their test results are of the highest standard.

## Mechanical Risks

Test	Performance Level				
	1	2	3	4	5
Abrasion Resistance Cycles	100	500	2000	8000	–
Blade Cut Resistance	1.2	2.5	5	10	20
Tear Resistance (newtons)	10	25	50	75	–
Puncture Resistance (newtons)	20	60	100	150	–

# TGC® NITRILE GLOVES BLACK

## The glove that changed an industry!

The first ultra-tough, black disposable glove in Australia and NZ.

Our unique formulation set the standard in Nitrile glove performance and is still the strongest, toughest and most chemically resistant glove material on the market.

TGC® Black Nitrile Disposable Gloves are enhanced with the latest low sweat technology.

TGC® Black Nitrile Disposable Gloves are the only black disposable glove certified for NATO and NSN codification for use by the defence force and aviation industry.
